

ABSTRACT

- 5 A process allows the relative locating of a first electrical appliance
and a second electrical appliance by the measurement of a first number of
alternations or of electrical periods by the first electrical appliance from the
energizing of the said first part and up to transmission of a signal by the first
electrical appliance, the measurement of a second number of alternations or
10 of electrical periods by the second electrical appliance from the energizing of
the said second part and up to receipt of a signal from the first electrical
appliance and the comparison of the first number with the second number.
